

Software Engineering Lab Project Proposal

Design and Implementation of a Digital Restaurant Menu System

Project Name: **Digital Restaurant Menu System**

Team Members: **Rasoul Rahimi**

Course**: Software Engineering Lab**

Instructor**: Mahdi Molaei**

TABLE OF CONTENTS

1. Project Vision

2. Target Audience

2.1. Restaurant Customers

2.2. Restaurant Managers

2.3. Menu Management Staff

3. Core Features & User Stories

3.1. Customer Features

3.2. Administration Features

4. Project Links

4.1. GitHub Repository

4.2. Project Management Board

1-Project Vision

The goal of this project is to design and implement a digital menu system for restaurants that allows customers to browse available dishes, beverages, and appetizers without using a printed menu. Customers will be able to view product images, descriptions, and prices through a user-friendly interface.

The system will include an administration panel that allows restaurant managers to create, and delete menu categories and products. Any changes made through the administration panel will automatically be reflected in the customer-facing menu.

The main objectives of the project are to simplify menu management, reduce the cost of printing paper menus, make updating information faster, and improve the overall customer experience.

2. Target Audience

The target audience of the system includes:

1-Restaurant Customers: People who want to browse menu items and view information about available dishes and beverages.

2-Restaurant Managers: People responsible for managing products, categories, prices, and menu images.

3-Menu Management Staff: Employees authorized by the manager to update menu information.

3. Core Features & User Stories

3.1. Customer Features

User Story 1 — View the Restaurant Menu

As a restaurant customer, I want to view the digital menu so that I can browse the available dishes and beverages.

User Story 2 — Browse Menu Categories

As a customer, I want to browse products by categories such as kebabs, stews, appetizers, and beverages so that I can find my desired items more easily.

User Story 3 — View Food Images

As a customer, I want to view images of menu items so that I can see what the dishes look like before choosing them.

User Story 4 — View Product Prices

As a customer, I want to see the price of each product so that I can choose items according to my budget.

User Story 5 — Use the Menu on Mobile Devices

As a customer, I want the digital menu to display properly on my mobile phone so that I can use it without needing a computer.

3.2. Administration Features

User Story 6 — Administrator Login

As a restaurant manager, I want to log in to the administration panel using a username and password so that only authorized users can manage the menu.

User Story 7 — Add a New Product

As a restaurant manager, I want to add a new product with its name, price, description, image, and category so that it appears on the restaurant menu.

User Story 8 — Delete a Product

As a restaurant manager, I want to remove discontinued or unavailable products from the menu so that customers do not see incorrect information.

User Story 9 — Manage Categories

As a restaurant manager, I want to create, edit, and delete menu categories so that I can organize the menu according to the restaurant's needs.

User Story 10 — Upload Product Images

As a restaurant manager, I want to upload an image for each product so that customers can see what the food looks like.

User Story 11 — Manage Product Availability

As a restaurant manager, I want to mark products as available or unavailable so that customers know which items can currently be ordered.
